Relevant Experience

2018 - current Full-Stack Web Developer

Print Studio One

I develop high-quality websites from front-end to back-end. Maintain and update over 200+ sites. Manage DNS records through WHM (launching sites and creating email accounts). Manage our GitHub organization and repositories to ensure code is up to standards. Work heavily with Designers and Project Managers. Provide insight to team members when facing challenging projects. Research & implement new SEO strategies for new Google algorithms. Create Google analytics reports and tag manager accounts. I also interviewed and tested multiple candidates for a Junior Web Developer position.

January 2018 - Web Developer (Intern)

March 2018 Project Whitecard

Attended meetings, presented and wrote a proposal for Pizza Hotline's application project. Wrote a proposal for The City of Winnipeg's RFP. Designed, developed, and branded a company selling website services.

July 2017 - Web Developer (Freelance)

August 2017 Chicken Chef Lorette

Managed, designed, and developed from start to finish. Using HTML5, CSS3, JavaScript, Bootstrap, and PHP. The back-end was custom and CRUD operations were used for basic data manipulation

Education

January 2017 - Web Development Diploma

January 2018 University of Winnipeg

Developed web applications from front to back. Learned HTML, CSS, JavaScript, jQuery, PHP at an advanced level. Other languages included Java and XML. Developed eCommerce applications using MVC frameworks such as Laravel. Developed plugins and custom themes for WordPress. We also learned basic networking fundamentals, as well as subnetting and binary. Educated on web design principles and designed our own mockups using Adobe Photoshop.

2014 - 2015 Serious Games Certificate

University of Winnipeg

Developed and designed educational video games using the Unity Engine and C#.
